

Ali Makki

Staten Island, NY

914-508-0865 | alimakki1661@gmail.com | GitHub: github.com/alimakki1661 |

Portfolio: alimakki1661.github.io

Summary

Computer Science student with hands-on experience building web projects using HTML, CSS, JavaScript, Bootstrap, REST APIs, SQL, C++, and Python. Strong interest in software development, data-driven applications, and real-world problem solving. Experienced with GitHub Pages, API testing through Postman, database queries, and creating clean project documentation.

Education

College of Staten Island — Bachelor's Degree in Computer Science

Expected Graduation: 2028

Relevant Coursework: Database Systems, Web Development, C++, JavaScript, Computer Networking, Data Structures, Software Development

Technical Skills

Languages: JavaScript, HTML, CSS, C++, Python, SQL

Web Tools: Bootstrap, GitHub Pages, REST APIs, Postman

Databases: MySQL, SQL queries, relational schemas, joins, aggregation, subqueries

Developer Tools: Git, GitHub, VS Code, Excel, Jupyter Notebook

Other: API documentation, debugging, data visualization, technical writing

Projects

Valorant REST API Web Application

Technologies: HTML, CSS, Bootstrap, JavaScript, REST API, Postman, GitHub Pages

Live Site: <https://alimakki1661.github.io/VALORANT-API/>

- Built a web application that connects to Valorant-related API endpoints and displays game data in a clean user interface.
- Integrated multiple API endpoints to retrieve and present information such as agents, maps, and game-related content.
- Tested API requests in Postman before implementing them into the website.
- Hosted the project using GitHub Pages for public access and presentation.
- Designed the project to show practical API usage, frontend development, and data presentation skills.

Database Systems Labs

Technologies: SQL, MySQL, relational databases

- Created and queried relational database schemas involving suppliers, parts, catalogs, and air traffic data.
- Wrote SQL queries using joins, grouping, aggregation, subqueries, foreign keys, and constraints.
- Practiced query optimization concepts including indexes, query plans, and SQL injection prevention.
- Built database scripts for table creation, data insertion, and controlled user permissions.

JavaScript Ordering Website

Technologies: HTML, CSS, JavaScript

- Developed an interactive ordering website using beginner-friendly JavaScript logic.
- Added user input handling, quantity validation, item selection, greeting messages, and delivery date calculation.

- Focused on simple, readable code structure and clear user interaction.
- Hosted the project through GitHub Pages.

C++ Rover Project

Technologies: C++, modular programming, command-line compilation

- Worked on a C++ rover simulation project using multiple source files and modular program structure.
- Practiced compiling, linking, debugging, and explaining program logic.
- Organized code across separate modules to improve readability and maintainability.

Experience

Certifications / Additional Training

CodePath - Summer 2026

Additional Strengths

- Strong problem-solving and debugging ability
- Comfortable learning new tools quickly
- Clear communication and documentation skills
- Reliable, detail-oriented, and willing to improve through feedback
