EDUCATION

College of Staten Island, City University of New York | B.S. in Computer Science **Expected 2028**
Relevant coursework: Data Structures, Database Systems, Computer Networking, Web Development, Programming Languages, Discrete Mathematics

EXPERIENCE

Peer Mentor | Computer Science Department, College of Staten Island **09/2026 – Present**

- Help update and expand the **CS Internship Handbook**, the department's online career guide used by every computer science student at the college, covering resumes, LinkedIn, GitHub, certifications, and internships.
- Review resumes for computer science students and give feedback on how they present their projects and skills.
- Co-host resume and LinkedIn workshops for 30+ computer science students.

PROJECTS

VALORANT Content & Status Dashboard [Live demo](#) | [Source code](#) **05/2026**

- Built and deployed a responsive dashboard that pulls agent, map, game-version, and North America server-status data from Riot's VALORANT Content and Platform Status APIs.
- Added per-map agent analytics (pick rate, ACS, ADR, K/D) using spike.gg stats, plus search, filtering, and sorting for agents and maps.
- Tested endpoints in Postman before integrating them in JavaScript; the public build uses saved API responses to keep the key private.

CodePath AI Engineering Projects [PathReview code](#) **Summer 2026**

- Implemented and debugged backend logic across four projects (Provenance Guard, Mixtape, Cinelog, PathReview): metadata scoring, playlist services, streak tracking, notifications, and watchlists.
- Isolated defects with automated tests and async SQLAlchemy mocks; brought Cinelog to 10/10 tests passing and PathReview to 18/19.
- Reviewed teammates' code to find errors and helped debug and fix technical issues.

Valorant Agent Guide [Live demo](#) **09/2026**

- Built a responsive VALORANT agent guide in HTML, CSS, and JavaScript, with filtering by role.
- Added map-specific agent recommendations for Lotus, Ascent, and Split.

TECHNICAL SKILLS

Languages: Python, JavaScript, C++, SQL, HTML, CSS

Web & APIs: React, REST APIs, Bootstrap, Postman, GitHub Pages, Netlify

Databases & Backend: MySQL, SQLAlchemy, relational schemas, joins, aggregation, subqueries

Tools & Testing: Git, GitHub, VS Code, Jupyter Notebook, automated testing

CERTIFICATIONS

CodePath: Applications of AI Engineering, Honors | Credential ID 422629 **Summer 2026**
New York Jobs CEO Council: Software Engineering Fellowship
DATAKOM: Partnering with AI in the Workplace
